THE #1 CHOICE IN GUNSHOT DETECTION FOR SCHOOLS

The Guardian Indoor Active Shooter Detection System

Would you send your children to a school without fire alarms?

For more than 100 years, the National Fire Protection Association (NFPA) has been developing codes and standards concerning all areas of life safety. The NFPA 3000 *Standard for an Active Shooter Response Program* and The U.S. Department of Homeland Security's *K-12 School Security Guide for Preventing and Protecting against Gun Violence** both encourage schools to consider Gunshot Detection technology along with door locks, video surveillance, and mass notification for active shooter preparedness. These technologies can all work together to provide schools and law enforcement with a comprehensive approach to responding to active shooter situations.

Active Shooter Detection is this generation's fire alarm.

Guardian is a system of smart sensors in wireless or Power-over-Ethernet (PoE) options that detect gunfire in buildings and report that a shot has occurred within one second. Guardian "listens" for the acoustic bang and "looks" for the infrared flash of gunfire to virtually eliminate false alerts to other sounds in the environment. This plug-and-play system is designed to work independently or integrate with school's existing technologies to provide School Resource Officers, local law enforcement, staff and students with immediate, actionable information to help make the best decisions to respond when seconds matter most.

Committed to School Safety

SDS is committed to advancing the safety and security of our nation's schoolchildren and educators. We make it our mission to ensure that all schools, regardless of size, have access to the same high quality gunshot detection solutions used by private industry and the U.S. Federal Government to protect their people and assets. That's why we offer special reduced pricing for K-12 schools and continually seek funding avenues school districts can use to obtain critical security equipment. Call today for a quote for your school or school district to find out just how affordable a system can be, how easily it is installed, and how it can work on it's own or in conjunction with your existing school security technologies.

**TRUST THE PROVEN
SCHOOL SOLUTION. CHOOSE GUARDIAN.**

Guardian uses dual-mode acoustic and infrared detection for a foolproof, fully automated alert system trusted by schools across the nation to protect their buildings and their people.

Highlights

- All shot processing done within the sensor - "no human in the loop"
- Dual Acoustic and IR Authentication
- SMS Text and E-Mail Message Alerts
- Floor plan map with sensor locations
- Integrated with leading-edge security systems: VMS, Access Control, Mass Notification, Mobile Alerts
- Simulation and training modes for active shooter drills
- Patented Handheld Testing Device
- 100% Detection Rate and 0% False Alert Rate (CPNI U.K. Certified)
- SAFETY Act Certified by D.H.S.
- Successfully tested against FCC & UL standards by NRTL Certified Test Facility

THE GUARDIAN INDOOR ACTIVE SHOOTER DETECTION SYSTEM

When seconds can save lives, unbeatable performance is no sales pitch. It's a requirement.

With Shooter Detection Systems you can rest easy with the knowledge that decades of gunshot detection experience goes into the design and delivery of each and every SDS gunshot detection system. Our gunshot detection systems are certified for superior performance by U.S., U.K., and Australian government authorities. Our strong partnerships with the industry's leading technology providers, performance certifications, and network of certified installers offer you a built-in support system you can trust. **But don't take our word for it, contact us today for a customer reference and ask them why they chose Shooter Detection Systems.**
